- 1. The Vermessungsdienst Nord (Surveying Service North) was headed by Surveying Engineer Gerhard Wittig and was located on Karl-Marx-Strasse, Schwerin. It had offices at Rostock, Neubrandenburg and Schwerin. A Soviet advisor was attached to the Vermessungsdienst Nord. The offices at Rostock, Neubrandenburg and Schwerin maintained field offices in various towns of the district.
- Between 1952 and 1955, the Soviet Air Force made aerial photographs of all East Germany. The aircraft flew at an altitude of about 4,000 m.and moved from east to west. The aerial photographs were analyzed at the offices of the Surveying Service.
- 3. At first, the 1:25,000 maps were revised. In 1955, work was started on the revision of the 1:10,000 maps.
- 4. In the arrangement of map grids, the grid system was replaced by the Krasovskiy system and all grids were related to the Soviet zero grid line. Maps were made 40 cm. square and they represent an area of 100 square km. Only some of the old map legends were retained, and in the use of map lines, Soviet procedures were followed.
- 5. The 1;25,000 maps were completed prior to the end of 1955, approved by the Ministry of the Interior and then sent to printed. The maps were scheduled to be issued in late 1956. Military installations may be entered on maps only after approval by the Soviet Army. The installations themselves had been blurred on the aerial photographs. The 1:25,000 maps were made for all East Germany, but the 1:10,000 maps were prepared only for a 20 km strip along the western border of East Germany.

Explanation of Conventional Signs Used for the New Official Maps of the GIR

Legend

- la - Besirk boundaries
- 16 - Kreis boundaries
- Boundaries of commandities lc
- Railroad signs, the number of tracks is indicated by the signs 2. within the white field of the symbol
- 20 - Narrow-gauge railroad lines
- Railroad stations with tracks and installations shown in faithful 2c outline
- **2**d - Engine shed or roundhouse
- Signal installation outside railroad stations 2
- Autobahnen marked by letter "A" and a figure indicating the 3a width of the individual lanes
- Long-distance highways, the letters indicating the surface of 3b the read. A stands for asphalt, B for concrete, P for pavement (the figure in parenthesis refers to the usable width of the highway).
- Highways, the figure indicates the distance to the next locality.
- 34 - Roads with a width of up to 4m
- 30 M - Local roads, the figure indicates the width of the road
- Field paths
- 3g - Foor paths
- Bridges, the figure refers to the carrying capacity of the bridge 48 in tons. The length of the bridge is also stated if it exceeds 10 m.
- 4b - Culvert
- 5a - Embankments and cuttings, the figure refers to the difference in altitude between the lowest and highest point.
- 50 - Dikes and fills
- Churches, A point fixed by triangulation is indicated by a white circle; a point not fixed by triangulation is marked by a black circle.
- Chapel
- Cemetery
- Wind mill
- 10 - Oil mill
- 11 - Observation tower
- 12a - Wooden fence
- 125 - Mash wire feans
- 12c - Barbed wire fence
- 13 - Hedge
- Prehistoris barrow, or boulder
- 14 15a - Woods painted green. The type of tree prevailing is indicated. In the event of mixed forest, several symbols are used. The prevailing type of tree is indicated by abbreviations; Bu stands for Buche (beach tree), Bi for Birke (birch tree), Ei for Eiche (oak tree), etc. Figures added have the following meaning: The figure above the fraction stroke indicated the height of trees, the figure below the fraction stroke indicates the average thickness of trees.

Legend continued:

S

```
15b
       - Ways and lames in forest. The width of rain forest lames is
          indicated by figures.
       - Clearing within a forest
       - Windfallen wood within a forest.
15d
15e
       - Park
151
       - Individual trees
16
       - Swampy terrain passable
16b
       - Swampy terrain, passable with difficulties
       - Swampy, impassable; the figure refers to the depth of the swamp
16c
         in meters
17
       - Maadow
18
       - Pasture
190
       - Garden
19Ъ
       - Garden with fruit trees
20a
and b
       - Bushes
20e
       - Bushes extending along the boundary of a field
       - Transmission line upto 220 V
21a
21b
       - High-tension transmission line fitted on wooden masts
21c
       - High-tension transmission line on sheel masts or concrete masts
214
       - High-tension transmission line on wooden masts placed irregularly
210
       - A telephone line on wooden masts
21f
       - Power transmission line with transformer
224
       - Fire-proof buildings
22b
       - Non-fire-proof buildings
22e
       - Public buildings (post offices, schools etc)
22d
       - Major economic installations, abbreviations added indicate the
         type of installation
220
       - Forestry
221
       - Factory with smoke stack; the abbreviations indicate the type
         of installation
22g
       - Chemical works
23
       - Road signs
24
       - Fill ingetation, fuel dump, bettery charging station (within rajor
         localities, falling stations are marked by a "T",)
25
       - Airfield
26
       - Trigonometrical points, the figures indicating the altatude. The
         altitude has been determined with an accuracy of plus/minus 0.2 mm.
27
       - Probably bench mark
28a
         Waters more than 5 m wide are marked by two lines; waters with a
         width under 5 m are marked by one line. The speed of current is
       indicated in meters/second.
286
       - Regulated waters more than 3 m whide
29a
       - Contour line for the 25 m level
29b
      - Contour line for the 5 m level
       - Contour line for the 2.5 m level
29c
      - Contour line for the 1,25 m level
